Save on electricity costs with a climate-friendly solar cell-based solution for the construction site! With solar panel modules on the roof of your containers, you will help promote the green ...

Hybrid Greentech is behind the energy management system that will be used to operate the battery at the airport. This also requires security measures.

The battery system is specifically built for Copenhagen Airport, Denmark's largest airport, taking into account the airport's high security level concerning both IT and fire risks.

As one of the first airports in Europe, Copenhagen Airport has had a battery installed for storing green power. It is a milestone achieved ...

Among the most innovative solutions is the solar power container, a compact and modular system designed to provide reliable, off-grid electricity generation.

The Intech Energy Container is a fully autonomous power system developed by Intech to provide electricity in off-grid locations. Each container is equipped with a photovoltaic array, a battery ...

Copenhagen Airport is testing green energy storage with the installation of a large battery to capture wind and solar energy, making it one of the first airports in the world to take this step ...

Copenhagen Airport has taken a bold step towards sustainability by installing one of Europe's first large batteries for storing green energy within an airport's critical infrastructure.

Hybrid Greentech is behind the energy management system that will be used to operate the battery at the
