Are EV batteries covered by a warranty?

Regional variations significantly impact warranty applicability. European Union regulations mandate minimum 6-year coverage for EV batteries, while U.S. warranties often prioritize cycle counts over calendar years.

Why do solar batteries need a warranty?

⌘ Batteries store excess solar power for use at night or during cloudy days. They're designed to cycle every day. That repeated use naturally wears them down over time, so warranties often reflect this by including limits based on time, energy throughput, or charge cycles. Knowing this upfront simply helps you budget and plan for future upgrades.

Why do solar panels have a shorter warranty period?

Unlike panels that sit on your roof and soak up the sun, inverters and batteries are actively working all day. That extra effort is why they tend to have shorter warranty periods. ⌘ Inverters act as the brain of your solar system.

Why do solar inverters have a shorter warranty period?

That extra effort is why they tend to have shorter warranty periods. ⌘ Inverters act as the brain of your solar system. They convert DC electricity into AC power you can use in your home, and they're constantly monitoring and adjusting your system. Since they run constantly, they usually need replacing after about 10-15 years.
