Why do you need a sine wave inverter?

Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level. A pure sine wave inverter also saves you money, as it's much more efficient than the older, jagged wave inverters.

What is a true sinewave power inverter?

Loads connected to a KISAE true sinewave power inverter will perform better, audio/video applications will run cooler, and motor loads will run at optimal efficiency, resulting in potentially longer equipment life. KISAE offers a variety of power inverter sizes ranging from 400W to 3000W.

What are the features of a sine wave inverter?

Features include: Premium 2000 watt true sine wave power inverter. Provides clean, pure sinewave power ideal for sensitive electronics. Low battery shutdown prevents total battery discharge. Built-in LED display for battery status and load measurement. GFCI & breaker protected (North American model only). Over temperature shutdown.

What is a pure sine wave inverter?

KISAE Pure Sine Wave (True Sine Wave) inverters offer the most reliable wave form available, providing power almost identical to utility power - no harmonic distortion, noise or excess heat. They are the preferred choice for powering 'sensitive loads' like onboard electronics and demanding motor loads.

KISAE offers a unique power solution that changes direct current (DC) to alternating current (AC), one with Modified sine wave output, the other in True / Pure sine wave output.
