The project will convert the city's more than 75,000 street and alley lights to energy-efficient LED technology with remote monitoring and control capabilities.

Compared with classical AC systems, our DC system provides Solid State Protection - limited short circuit currents and ultra-fast breaking - which gives flexibility to public lighting ...

The project included replacing ~75,000 street and alley lights with energy-efficient LEDs, including those that shine on "Welcome to Washington, D.C." entrance signs, certain bike paths, ...

Continuous monitoring and remote control of the lighting grid were achieved through solid-state breakers, offering enhanced data visibility and control. Overall, the project demonstrates the ...

The District is seeking a private partner to retrofit the lights with more energy-efficient light-emitting diodes (LED), install a remote monitoring and control system, and repair and maintain ...

Acuity Brands' DC2DC architecture provides for distributed DC power to a LED lighting system, enhancing its efficiency by eliminating the need and cost to convert AC to DC power at the ...

Seen as one of the largest urban streetlight modernization projects in the US, the DC Smart Street Lighting Project decided to convert all the city's street and alley lights to ...

More than just a lighting upgrade, this project has reshaped the way Washington, DC, experiences its urban spaces at night. Residents have embraced the improved ...
