-----

The communication mutual interference between multiple BSs: When multiple BSs provide communication services to the UEs in the same area, the UEs will receive multiple downlink ...

Important elements of a smart grid include the Internet of Things (IoT), renewable-powered base stations (BSs), demand-side management (DSM), green wireless ...

Abstract: Green network aims to promote the sustainable development of communication systems, and base station (BS) and cells sleeping has been proven effective in reducing the ...

As 6G deployment accelerates, integrating green energy infrastructure into network design isn't just optional - it's becoming the price of market entry. Recent breakthroughs like perovskite ...

Presenting state-of-the-art research on green radio communications and networking technology by leaders in the field, this book is invaluable for researchers and professionals working in ...

We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

With the proposed method, a terrestrial base station (BS) or a UAV can be aware of the deployed environments and use the shadowing features to determine the proper transmitted power. It ...

For mobile networks powered by smart grids and green energy supply, the study in proposed an energy-sharing architecture among base stations based on physical lines and ...

The green base station solution involves base station system architecture, base station form, power saving

# Communication Green inter-base station communication
