-----

Structural energy storage devices (SESDs), designed to simultaneously store electrical energy and withstand mechanical loads, offer great potential to reduce the overall ...

This Account explores the pathways from exfoliated 2D nanosheets to densely packed, yet porous assemblies tailored for ...

1. Supercapacitor A supercapacitor is an electrochemical capacitor that has an unusually high energy density compared to common capacitors, typically on the order of thousands of times ...

Our insights into the assembly and densification of 2D materials provide a comprehensive foundation for future research and practical applications in compact, high ...

We analyze how self-assembly strategies can create storage architectures that improve device performance toward higher energy densities, longevity, rate capability, and device safety.

In this review following a brief introduction to EES and block copolymer (BCP) self-assembly, we highlight creative approaches to structure-direct ...

Here, we review the recent advances in the self-assembly and tailoring methods of graphene-based colloids, highlight several representative applications, and discuss future ...

This comprehensive review systematically analyzes recent developments in electrochemical storage systems for renewable energy integration, with particular emphasis on ...

In this review following a brief introduction to EES and block copolymer (BCP) self-assembly, we highlight

creative approaches to structure-direct several classes of EES materials and ...

NLR is researching advanced electrochemical energy storage systems, including redox flow batteries and solid-state batteries. Electrochemical energy storage systems face ...

This Account explores the pathways from exfoliated 2D nanosheets to densely packed, yet porous assemblies tailored for compact energy storage. Focusing on graphene ...

Electrochemical energy-storage systems such as supercapacitors and lithium-ion batteries require complex intertwined networks that provide fast transport pathways for ions ...
