This page outlines key concepts in electromagnetism, including electromagnetic forces, measurements of fields, and fundamental laws like Gauss's Law and Ampere's Law.

The force that the electromagnetic field exerts on electrically charged particles, called the electromagnetic force, is one of the fundamental forces, and is responsible for most of the ...

Electromagnetic forces occur between any two charged particles. Electric forces cause an attraction between particles with opposite charges and repulsion between particles with the ...

The electromagnetic force causes objects with opposite electrical charges to be attracted to each other. For example, protons, which have a positive charge, are attracted to electrons, which ...

Electromagnetism is one of the four fundamental forces of nature. Learn about the relationship between electricity and magnetism, the different wavelengths on the ...

Electromagnetic force is the form of energy that causes all reactions between particles (= extremely small pieces) of matter, which have either positive or negative electrical characteristics.

Course Description Electromagnetic Theory covers the basic principles of electromagnetism: experimental basis, electrostatics, magnetic fields of steady currents, motional e.m.f. and ...

The mathematical equations formulated by Maxwell incorporated light and wave phenomena into electromagnetism. He showed that electric and magnetic fields travel together ...

Electromagnetic energy travels in waves and spans a broad spectrum from very long radio waves to very short
