Who is responsible for the electricity costs associated with Bess auxiliary loads?
Project ownersare also responsible for the electricity costs associated with the BESS auxiliary load during operation. The electricity cost for auxiliary loads depends on the energy consumption (kWh) and the pricing structure set by independent system operators or utilities. For example:

What is a battery energy storage system (BESS)?
BESS stands for Battery Energy Storage Systems,which store energy generated from renewable sources like solar or wind. The stored energy can then be used when demand is high,ensuring a stable and reliable energy supply.

Do I need backup power for a Bess auxiliary load?
For certain projects,backup power must be providedfor the BESS auxiliary load as required by the BESS supplier or fire codes. Some BESS suppliers mandate uninterrupted power to maintain the operation of thermal management systems,ensuring battery temperatures remain within desired limits to minimize degradation.

What if a Bess product does not meet backup power requirements?
If a BESS product cannot meet these backup power requirements as mandated by the code or the Authority Having Jurisdiction (AHJ),an external backup power source needs to be provided. Options for backup power include local distribution network feeders (if available with sufficient kVA rating) or backup generators.
