Why are energy prices so high in Iran?

One, the domestic gas and power prices in Iran are too low and this leads to high energy demand. The low prices are essentially a government subsidy aimed to keep the public complacent. In the past, when the government has raised energy prices, they have often triggered large-scale protests. The regime cannot risk new unrest.

What is the price of electricity in Iran?

Iran, September 2022: The price of electricity is 0.005 U.S. Dollar per kWh for households and 0.000 U.S. Dollar for businesses which includes all components of the electricity bill such as the cost of power, distribution and taxes.

What percentage of Iran's electricity is generated by thermal power plants?

Currently, over 90% of the country's electricity is generated by thermal power plants, with very low efficiency rates. Some of the country's oldest plants have efficiency rates as low as 20%. Renewables provide only 1% of Iran's electricity. Iran also has a major gasoline and diesel deficit.

Why does Iran lose 40% of electricity and gas consumption?

Due to aging and inefficient infrastructure, Iran loses during production and transmission 40% of the total household electricity and gas consumption in Iran. In addition, Iran does not maintain sufficient gas storage capacity, in order to balance seasonal demand and production swings and other challenges.

The Iran energy market data since 1990 and up to 2024 is included in the Excel file accompanying the Iran country report. It showcases the ...

This post explores the current state of Iran's new energy market, recent policies, key case studies in solar PV and energy storage, and the promising yet challenging road ahead.

These retail prices were collected in June 2025 and include the cost of power, distribution and transmission, and all taxes and fees. Compare Iran with 150 other countries.

In the last two decades, the liberalization process has been the basis for a major change in the industry in order to compete in the manufacturing and supply sectors of the electricity industry.

One, the domestic gas and power prices in Iran are too low and this leads to high energy demand. The low prices are essentially a government subsidy aimed to keep the public ...

6.8 GW of energy storage globally (Figure ES8). Thermal energy storage applications, at present, are dominated by CSP plants, with the storage enabling them to dispatch electricity ...

Navigating Iran mobile energy storage power supply prices requires understanding technological trade-offs and market dynamics. While lithium systems currently offer the best value, emerging ...

The Iran energy market data since 1990 and up to 2024 is included in the Excel file accompanying the Iran country report. It showcases the historical evolution, allowing users to easily work with ...

One, the domestic gas and power prices in Iran are too low and this leads to high energy demand. The low prices are essentially a ...

Iran may stabilize domestic energy output and lessen its reliance on fuel imports by depoliticizing energy prices, addressing systemic inefficiencies, and utilizing its substantial ...

Iran's economy consumed an estimated 13.5 quadrillion British thermal units (quads) of primary energy in 2022 (Table 1), making it the highest energy consumer in the Middle East.

This post explores the current state of Iran's new energy market, recent policies, key case studies in solar PV and energy storage, ...
