---

We currently have more than 300MWs of battery storage capacity in operation in Ireland, making it one of the largest battery portfolios in Europe. We plan to develop a pipeline of large scale ...

Experts from across the energy industry emphasised the importance of energy storage to enhance grid flexibility, support renewable integration, and promote industry ...

The Single Electricity Market (SEM) on the island of Ireland is set for a battery storage boom, with short-to-medium duration capacity forecast to increase fivefold by 2030, ...

Wind and solar energy play a key role in Ireland's transition from fossil-fuel-based electricity generation. But these precious resources will need to be stored for times when the ...

New wholesale electricity market rules have been introduced in Ireland, designed to allow battery storage assets to participate directly.

Experts from across the energy industry emphasised the importance of energy storage to enhance grid flexibility, support ...

Ireland's energy storage could increase eightfold by 2035, according to a new report by Energy Storage Ireland. It states that battery storage has the potential to provide ...

Using focus groups and a survey with the renewable energy and storage sector, we document perspectives on the critical barriers, innovative solutions and policy gaps identified ...

Wind and solar energy play a key role in Ireland's transition from fossil-fuel-based electricity generation. But these precious resources ...

Today, in May 2022, we have 13 projects operating with a combined capacity of 500 MW and we expect this to grow rapidly to nearly 800 MW by 2023. There are nearly 60 more battery ...

The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key ...

"The fundamentals for storage are really strong in Ireland, because we're a relatively isolated system on the periphery of Europe. As we get to 2030 and Ireland starts ...
