-----  
What are the top wind energy projects supporting the energy transition?

The top wind energy projects supporting the energy transition include companies like China Longyuan Power, SSE Renewables, Equinor, and Enercon. Ambitious government policies, technical advancements and increasing investor confidence are pushing wind energy to new heights around the world.

What is China's largest offshore wind farm?

Among China's iconic projects is the 1.7 GW Yangjiang Shaba III complex in the South China Sea, China's largest deep-sea wind farm. This project alone accounts for nearly 10% of Guangdong Province's total operational offshore wind capacity.

How big is China's Wind power?

This is roughly four times the global average for capacity under construction (9%). China's wind capacity follows a similar rate of growth as solar, according to Global Energy Monitor's Global Wind Power Tracker, with over 590 GW in prospective phases -- nearly 530 GW of onshore capacity and 63 GW of offshore capacity.

How big is China's offshore wind powerhouse?

Of this, 510 GW is already under construction, primed to be added to China's 1.4 TW solar and wind capacity already in operation. As of March 2025, China has emerged as the world's offshore wind powerhouse -- growing from under 5 GW in 2018 to 42.7 GW in 2025 (50% of global capacity).

It is a key energy project that serves the construction of the national "Shagohuang" large-scale wind power and photovoltaic base and accelerates the creation of a new electricity ...

This is the onshore wind power project with the largest unit capacity in China, with a total of 333 Goldwind GWH191-5.27MW wind turbines. The smooth progress of the project has effectively ...

The power base now has seven large-scale hydropower stations and five wind and solar power projects in operation, with a total installed capacity of some 21 million kilowatts. At ...

In this paper, a large-scale clean energy base system is modeled with EBSILON and a capacity calculation method is established by minimizing the investment cost and ...

An 800-megawatt wind power plant was connected to the grid in early May in Qujing City, Yunnan Province, marking the country's largest installed wind farm built on the ...

The wind farm sits in the Gobi Desert where there are regular high winds, however this is around 1,000 miles from high density cities that could be its biggest energy consumers.

The power base now has seven large-scale hydropower stations and five wind and solar power projects in operation, with a total ...

China's wind power generation stems from several large wind installations across the country. Some areas, especially Inner Mongolia in ...

The wind farm sits in the Gobi Desert where there are regular high winds, however this is around 1,000 miles from high density cities ...

With a total installed capacity of 500 MW, it operates 65 wind turbines each rated at 7.7 MW, making it China's largest single-unit-capacity wind power project in a high-altitude ...

The Laba Mountain Wind Power Project, part of the first batch of large wind and solar power base projects in China and the largest wind power project commissioned in ...

An 800-megawatt wind power plant was connected to the grid in early May in Qujing City, Yunnan Province, marking the country's ...
