Will Madrid become a central base for energy storage systems?

"Our strategy is very clear: to turn Madrid into our central base for energy storage systems. From there, we'll provide agile and specialized support to clients across Europe and Latin America," Gattoni explained.

What is the European Commission's new energy storage support scheme?

The European Commission approved a new support scheme. It targets large-scale energy storage projects in Spain. It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage.

How much energy storage will be needed in the future?

Taking into consideration the ratios of aid granted per megawatt of storage in previous calls, 2.5 to 3.5 gigawatts of new capacity could be expected. This decisive boost to the development of energy storage will help ensure the transformation of the energy system to make it more flexible, robust and resilient.

It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage. The program supports ...

At this moment the local Spanish storage market is waiting for regulations to be in place, proposing bands for the electricity demand and supply of batteries during different peak ...

At an event in Madrid, the government presented its new Electricity Transmission Grid Planning strategy to 2030, outlining a sweeping EUR16 billion investment package designed ...

It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and ...

With Intersolar Europe 2025 as a platform to highlight its evolution, Risen Energy emerges as a strategic partner in the global energy transition, combining cutting-edge storage solutions, ...

The European Commission has approved a new aid scheme that will allow Spain to deploy large-scale electricity storage, both in hybridisation with renewable energy facilities ...

With a significant deployment of renewable energy capacity, Spain stands out in this report for two factors that go beyond traditional solar energy and wind sources in the field ...

The scheme aims to deploy between 2.5 and 3.5 gigawatts (GW) of new storage capacity, enhancing the flexibility and resilience of the national power system while enabling ...

In this report, we delve into the developments in the regulatory framework of the Spanish electricity system and explore the potential of Spain's battery energy storage systems ...

With Spain aiming for 22.5GW of energy storage by 2030 [8], Madrid sits at the heart of this transformation. Let's unpack what's driving this revolution and why your business ...

The country is generating (and committed to steady growth in the coming years) a significant portion of energy from renewables, makes the BESS role increasingly important in ...

The European Commission has approved a new aid scheme that will allow Spain to deploy large-scale electricity storage, both in ...
