We supply specific modules incorporating THera (R) technology at typical refueling station pressures, from 240 bar up to 1000 bar, to ensure a reliable transport of high-pressure ...

Portable solar-powered desalination unit, skid-mounted for easy transport, providing reliable fresh water in remote locations and emergencies.

It embeds Solar -VFDs for high pressure RO pumps up to 1000 PSI (TDS up to 45,000). Typical applications include coastal small towns and villages, resorts, ships and power plants.

There are several different methods for cleaning, but the traditional approach is water-based, consisting of either a high pressure spray or a deluge spray (non-contact cleaning), or contact ...

A solar powered desalination unit designed for remote communities has been tested in the Northern Territory of Australia. The "reverse-osmosis solar installation" (ROSI) uses ...

Located at the top of tall towers, John Cockerill's receivers collect the concentrated solar energy and transfer it either directly into high pressure steam (Direct Steam Generation) or into hot ...

Whether deployed in a desert construction zone, an island resort, or a refugee camp, it produces clean water without relying on diesel or utility electricity. Our solar architecture is optimized for ...

Whether deployed in a desert construction zone, an island resort, or a refugee camp, it produces clean water

without relying on diesel or utility ...

Coupling water storage with solar can successfully and cost effectively reduce the intermittency of solar energy for different applications. However the elaborate exploration of ...

The study concludes that the integration of HDH units with pyramid solar stills, coupled with thermal storage and optimized operational parameters, significantly enhances ...
