The cost of producing wind energy has decreased nearly fourfold since 1980, according to the Electric Power Research Institute. Wind energy is the country's fourth-largest source of electric ...

Access a detailed dataset focused on the power plants across San Diego County, California, tailored for GIS professionals. This resource provides ...

Wind Energy San Diego will increasingly be integrated with other forms of renewable energy, such as ...

The significant solar and geothermal potential of neighboring Imperial County is a large potential resource for San Diego that may require upgrades to the transmission network.

Although the research emphasis is wind and solar power, much of the work is crosscutting and applicable to a range of renewable energy technologies.

We research and develop higher-performance and lower-cost materials and devices for energy generation, storage and conversion. Our target ...

The goal of this measure is to facilitate a comprehensive transition to renewable energy sources in San Diego, with a particular focus on leveraging San Diego Community Power's 100% ...

We research and develop higher-performance and lower-cost materials and devices for energy generation, storage and conversion. Our target industries are electric vehicles, microgrids, ...

These facilities store excess renewable energy from solar and wind by pumping water in a closed-loop system to an upper reservoir when energy is abundant. When energy demand is high, the ...
