Slovenia installed 85 MW of solar in the first half of 2025, driven by growth in commercial and industrial (C&I) projects and utility ...

Slovenia installed 85 MW of solar in the first half of 2025, driven by growth in commercial and industrial (C&I) projects and utility-scale installations. The lowest total in four ...

Slovenia is turning down the heat on pollution with a groundbreaking air conditioning system that cools without using harmful gases - promising a cleaner, greener future for homes ...

Explore Slovenia's rising demand for solar-powered homes by 2025, driven by economic benefits and environmental impact amidst challenges in the renewable energy transition.

Looking ahead, researchers envision multiple applications for the Slovenian technology beyond traditional air conditioning. The ...

Looking ahead, researchers envision multiple applications for the Slovenian technology beyond traditional air conditioning. The system's modular and silent operation ...

This piece will review the need for solar-powered air conditioning, how solar ACs work, and how much you can expect to save on utilities. The benefits of solar-powered air conditioning.

Slovenia has secured 11.9 million euros in EU funding to boost community self-supply of electricity from renewable sources between 2025-2027. The funds will support ...

Slovenia's breakthrough offers a glimpse of a different future - one where cooling systems operate silently, efficiently, and without environmental harm. The technology's ...

Slovenia has introduced a new regulation that simplifies the funding process for large-scale solar and wind installations. This regulation, announced by the Ministry of ...

Summary: Explore how solar-powered air conditioning plants in Slovenia combine renewable energy with smart cooling solutions. Discover industry trends, cost-saving benefits, and real ...

In Slovenia, researchers are developing a revolutionary cooling system that skips toxic gases and instead uses recyclable nickel-titanium alloy to keep things chill.
