Solar glass is a type of glass that is specially designed to harness solar energy and convert it into electricity. It is made by incorporating photovoltaic cells into the glass, allowing it ...

Pakistan's unstable electricity supply has driven a boom in private adoption of solar power - but it could further destabilize the national grid.

Against the yellow sand thousands of curved mirrors, each taller than a human, stand in rows. These are part of a solar-power generating plant called Noor or Ouarzazate ...

Doubling as a building component to enhance sustainability and energy efficiency in commercial buildings, the Solarvolt(TM) BIPV glass system has been honored for delivering high ...

Solar glass that turns windows into transparent solar panels could turn skyscrapers into solar farms, experts say.

Solar panels can traditionally only produce power when the sun shines, but new developments are changing that. Scientists have developed solar panels that can work in the ...

2025 has been marked by significant global shifts, including increased geopolitical instability, the accelerating impact of AI and a changing labour market.

As AI is deployed across the global economy, so too is its environmental footprint growing -- but integrating AI into solar farms could offer a solution.

India has a huge opportunity to ensure urban infrastructure is built using climate-conscious strategies. Low-carbon construction, passive design, green buildings and ...

Edge AI puts intelligence at the edges of power networks, working locally on or near the grid's sensors and devices. Edge AI can help us build a smarter, more resilient ...

The \$10 million project took nine years and makes Chattanooga the first US airport to be 100% solar powered.

Solar windows, also known as photovoltaic windows or solar glass, are a type of building-integrated photovoltaics (BIPV) technology. ...
