Does Southeast Asia need two-wheeled vehicle electrification?

Although international efforts toward vehicle electrification in Southeast Asia have primarily focused on four-wheeled vehicles, greater emphasis must be directed toward two-wheeled vehicles (2 W). Southeast Asia has the world's highest rate of 2 W penetration, particularly in Thailand, Vietnam, and Indonesia.

Should e2W batteries be switched to lithium-ion batteries in Southeast Asia?

The shift from lead-acid to advanced lithium-ion batteries for E2Ws in Southeast Asia would significantly improve vehicle performance, offering enhanced energy efficiency, extended range, and longer battery life. This transition is especially critical for delivery services and motorbike-taxis that require ranges of 80-100 km.

How can e2W companies manage supply chain disruptions in Southeast Asia?

In order to mitigate the risks associated with global supply chain disruptions and ensure consistent access to key components, E2W companies in Southeast Asia should prioritize the stabilization of supply chains and diversify their revenue streams through the provision of supplementary services.

How big is the e2W market in Southeast Asia?

Despite 2 W sales in Southeast Asia reaching 12.9 million units annually, E2W sales represents only 4% of total 2 W. Vietnam leads the E2W market, with an 8.5% market share in 2020, and its E2W sector is expected to grow to \$22 billion by 2025, with an annual growth rate of 7.3% from 2021 to 2025.

FCC ID 2AZKN-M9 (2AZKN -M9) Foldable magnetic Wireless Fast Charging Station manufactured by Shenzhen XinZhaoYi Technology Co., LTD operating frequencies, ...

Bidirectional EV charging allows electric vehicles to not only draw power from the grid but also send energy back to it. Learn about the process, types, ...

The establishment of comprehensive technical standards for E2Ws, including charging infrastructure and battery management, will drive investment in the E2W sector ...

This milestone marks the entry of Yotai's smart charging solutions into the Southeast Asian market in a "benchmark role," serving as a critical starting point for the full rollout of the ...

Our 800V high-voltage platform technology, paired with upgraded EV batteries, supports 5.5C ultra-fast charging, allowing vehicles to charge from 10 percent to 80 percent in ...

According to a white paper published by the Asia-Pacific Economic Cooperation (APEC), there are currently three dominant charging connector standards in use across the ...

This report analyzes the charging infrastructure ecosystem across key ASEAN economies--Thailand, Indonesia, Malaysia, Vietnam, and the Philippines.

Bidirectional EV charging allows electric vehicles to not only draw power from the grid but also send energy back to it. Learn about the process, types, and benefits of this technology.

CCS2 (Combined Charging System Type 2) represents dominant standard for DC fast charging, offering compatibility with European and many Asian electric vehicle models ...

Southeast Asia's tourist corridors have a fast lane waiting, but only if EV charging steps up with smart, flexible, and collaborative solutions.

Our PCS Bidirectional battery inverter from 50KW to 630KW for large scale solar projects. Can be used alone or with solar charge controller and other accessories for different application ...
