I found two ways to determine how many elements are in a variable... I always get the same values for `len ()` and `size ()`. Is there a difference? Could `size ()` have come with an ...

In several C++ examples I see a use of the type `size_t` where I would have used a simple `int`. What's the difference, and why `size_t` should be better?

What is the difference between `.size()` and `.length` ? Is `.size()` only for arraylists and `.length` only for arrays?

```
typedef size_t intc; // (instead of unsigned int)
typedef ssize_t uintc; // (instead of int)
Because strlen, string, vector... all use size_t, so I usually use size_t. And I only use ssize_t when it may ...
```

The approach basically builds on other work where people experimentally identified the size of primitives and typical Java objects and then apply that knowledge to a ...

As you know, `matlab` deals mainly with matrices. So, the `size` function gives you the dimension of a matrix depending on how you use it. If you say `size(A)`, it ...

In this case, depending upon what your use case is, you might be better off using `int` (or `long long`) for `s1` and `s2`. There are some functions in C/POSIX that could/should use `size_t`, but don't ...

If the size of the `int` is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have ...

Here's a hint: My absolute largest repository contains only images of various formats, it's an "artwork" repo of icons which I use in various apps. Yet, GitHub reports the size as 0.
